1980 Mathematics Subject Classification (1985)

1980 Mathematics Subject Classification

This is essentially a reprinting of the 1985 version of the 1980 Mathematics Subject Classification; it includes the changes announced in the MR Annual Indexes for 1985 and 1987 and used in MR since the January 1986 issue and the January 1988 issue, respectively.

A completely revised version of the Mathematics Subject Classification is in preparation and is expected to replace the present one, effective with the January 1991 issue. It will be published in the MR Annual Index for 1990.

Instructions for using the 1980 Mathematics Subject Classification

These instructions apply uniformly to all fields listed. The main purpose of the classification is to help readers to find the items of present or potential interest to them as readily as possible—in MR, in Zbl, or anywhere else where this classification system is used. The review of a paper or book should be printed in the section where it will receive the broadest attention from all readers possibly interested in it—these include both people working in that area and people who are familiar with that area and apply its results and methods elsewhere (inside or outside of mathematics). It will be extremely useful for both readers and classifiers to familiarize themselves with the entire classification system and thus to become aware of all the classifications of possible interest to them.

Every paper or book reviewed in MR receives precisely one "primary" classification number; it is simply the number of the section in which the review of the item will be printed. This section should be the one that covers the principal contribution. When a paper contains several principal contributions in different areas, the primary classification should cover the "most important" among them. A paper or book may receive one or several "secondary" classification numbers (or "cross-references"), to cover any remaining principal contributions, ancillary results, motivation or origin of the problems discussed, intended or potential field of application, or other significant aspects worthy of notice.

The "primary" principal contribution is meant to be the one including the most important part of the work actually done in the paper. For example, a paper whose main overall content is the solution of a problem in graph theory, which arose in computer science and whose solution is (perhaps) at present only of interest to computer scientists, belongs primarily in 05C with a cross-reference in 68; conversely, papers whose overall content lies mainly in computer science should receive a primary classification in 68, even if they make heavy use of graph theory and prove several new graph-theoretic results along the way.

For any paper or book with its primary classification in (i.e., its review printed in) an "applied" section (68 through 94), it is recommended that a cross-reference in some "pure" mathematics section(s) (00 through 65) be given whenever that is appropriate. Do not use 00A89 as a primary classification.

There are two types of cross-references given after many classifications in the list. The first type is of the form "{For A, see X}"; if this appears in section Y, it means that for contributions described by A one should usually assign the classification X, not Y. The other type of cross-reference merely points out related classifications; it is of the form "[See also ...]", "[See mainly ...]", etc., and the classifications listed in the brackets may, but need not, be added to the classification of a paper, or they may be used in place of the classification where the cross-reference is given. The classifier will have to judge which classification is the most appropriate for the paper at hand.

DISCONTINUED numbers from the 1980 Mathematics Subject Classification

Discontinued number	Date discontinued	Replacement
10–XX	1985 (1984 annual index)	now 11–XX
12A,B,C	1985 (1984 annual index)	now 11R,S,T
44A50	1980 (1979 annual index)	now 44A55 (see 44A60 for moment problems)
68A—K	1985 (1984 annual index)	now 68M—U
76A60	1984 (1983 annual index)	now 76–08
78A57	1982 (1981 annual index)	now 78A97
80A35	1985 (1984 annual index)	now 80A97
81E10	1985 (1984 annual index)	split into 81E08, 81E13
81H05	1982 (1981 annual index)	split into 81Hxx, 81H10, 81H20, 81H99
82A77	1985 (1984 annual index)	now 82A97
90C42	1980 (1979 annual index)	absorbed into 90C15
90C45, 90C47	1980 (1979 annual index)	absorbed into 90C40

Conversion tables have been prepared: (i) from 10–XX and 12A, B, C to 11–XX; (ii) from the old 68A—K to the new 68M—U. These tables are available from the editorial office of MR; they will also be included with reprints of the complete classification.
